

INFANT FORMULA, POWDERED

Date: April 2009

Code: B420

PRODUCT DESCRIPTION

- Powdered infant formula is made with cow's milk that has been changed to resemble breast milk, and can be used as an alternative for infants who are not breast-fed. Formula has added iron, is easy to digest, and gives the right amount of nutrients for infants.

PACK/YIELD

- Powdered infant formula is packed in about 13 ounce containers. One container, when mixed with water as directed on the package, will make about 104 fluid ounces of formula.

STORAGE

- Store unopened formula in a cool, clean, dry place.
- Cover opened cans of formula with the plastic lid and store at room temperature. Discard any remaining, dry, unused formula after 30 days.
- Look at the "Best if used by" or "Best by" date on the can. Infant formula should not be consumed beyond the "use by date."
- For further guidance on how to store and maintain USDA Foods, please visit the FDD Web site at: <http://www.fns.usda.gov/fdd/facts/biubguidance.htm>.

PREPARATION/COOKING

- Wash hands before preparing formula.
- Use 1 packed scoop for every 2 ounces of warm water.
- Once prepared, formula can be kept covered in the refrigerator for 24 to 48 hours (always check the label for exact instructions).
- Discard any leftover formula within one hour after feeding.

USES AND TIPS

- Always follow exact mixing instructions on the package.
- Use a standard measuring cup instead of bottle markings to measure water. Too little water will make the formula hard to digest. Too much water will dilute the formula, which means your baby will not get the right amount of calories.

- Do not microwave. This may cause uneven heating and possibly burn your baby.
- Formula should not be frozen before or after mixing.
- Ask your pediatrician if you need to boil the water in your area before mixing a bottle, or about using bottled water.

NUTRITION INFORMATION

- Powdered infant formula meets all nutritional needs for infants under 1 year of age.

FOOD SAFETY INFORMATION

- Ask your pediatrician if you need to boil the water in your area before mixing a bottle, or about using bottled water.
